FROM ZERO TO YOUR FIRST CUSTOMER

A practical 7-day guide to testing a small business idea

CONSTRUIR JUNTOS

Starter edition • 2026

How to use this guide

This guide helps you turn a simple idea into a first offer, speak with potential customers, and test demand before spending much money. It is not an income promise and does not replace professional advice.

The main rule

Do not start by buying inventory, hiring expensive services, or building something huge. Start by understanding a real problem, proposing a small solution, and listening to people who may need it.

Day 1 — Choose a specific problem

Write down three problems you can solve or responsibly research. Prefer problems that happen often, affect an identifiable group, and already lead people to seek solutions.

Exercise: turn an idea into a problem

Complete: “I help [type of person] who struggles with [specific problem] achieve [realistic outcome] through [product or service].” Avoid guaranteed claims such as “make money for sure” or “get rich fast.”

Day 2 — Talk to five people

Speak with five people who represent your audience. Ask: How do you handle this today? What is hardest? What have you tried? What would you like to be simpler? Listen without immediately trying to sell. Note repeated phrases.

Day 3 — Create a minimum useful offer

Build the smallest useful solution: a short guide, spreadsheet, checklist, editable template, or clearly scoped service. State what buyers receive, who it is for, what is excluded, and how it will be delivered.

Offer worksheet

Product name: ____ Audience: ____ Problem solved: ____ Included items: ____ Format: ____
Delivery time: ____ Test price: ____ Support/refund policy: ____

Day 4 — Set a test price

Research similar options and compare value, not just price. Calculate payment fees, taxes, production costs, support, and possible refunds. Start with a transparent price and revise it after real feedback.

Day 5 — Create a simple sales page

Explain who the product is for, the problem it addresses, what is included, examples, total price, delivery method, support contact, and refund terms. Do not use fake testimonials, fake countdowns, or artificial scarcity.

Day 6 — Invite people to review it

Show the offer to ten relevant people and ask for honest feedback. If someone buys, deliver what was promised and ask what could improve. If nobody is interested, revise the audience or offer before investing more.

Day 7 — Review the results

Count how many people you contacted, replied, showed interest, and bought. Identify the biggest objection. Decide whether to improve the offer, change the audience, or test another problem.

Validation worksheet

People contacted: ____ Replies: ____ Interested: ____ Sales: ____ Gross revenue: ____ Fees and costs: ____ Refunds: ____ Main lesson: ____

Estimate your result

Approximate result = revenue received – payment fees – direct costs – refunds – applicable taxes. Confirm tax obligations with a qualified professional. Gross revenue is not profit.

How to apply this to Construir Juntos

Start with a small catalog of original digital products: a basic finance spreadsheet, a small-business launch checklist, a quote template, a marketing guide, and a weekly planning kit. Create each item, test it with users, and expand only after learning.

Checklist before selling

■ Is the product original or properly licensed for resale? ■ Does the description match what is delivered? ■ Are price and fees clear? ■ Has payment been tested? ■ Has automatic delivery been tested? ■ Is support contact available? ■ Are privacy and refund terms published?

Final note

This plan is designed to help you learn from real customers, not guarantee results. Start with a small test, follow applicable laws, and be transparent about prices, limitations, and data use.
